

Thermal Therapy *Physio Vag*
provides a painless non invasive and non surgical treatment with surprising results from the very first session.

Thermal Therapy *Physio Vag*
treatments contribute to facilitate the increase of sexual satisfaction, diminished or lost because of vaginal and vulvar mucous membrane changes, and to maintain a high quality sexual life.

TECHNICAL CHARACTERISTICS

- 2 different handpieces for internal and external treatments
- 4 working frequencies to optimize the treatment according to depth and pathology to be treated
- Continuous and pulsed modes of operation (for athermal treatments)
- Temperature control
- High-quality touch screen colour display, power encoder, foot switch

CERTIFIED
ISO 9001

PhysioVag

Customizable Vaginal Thermal Treatments with a wide range of choices for a large number of gynaecological applications

Two different handpieces allow all thermal non invasive and non surgical applications which exploit the diathermy principle, the deep heating of the skin tissue, due to high frequency electromagnetic waves.
Thermal Therapy *Physio Vag* treatments act on functional pathologies as vaginal dryness, bladder leakage, vaginal prolapse, and fighting against external vaginal aging, achieve aesthetic results as outer and inner labia re-shaping and vaginal tightening.

Diathermy has a positive impact on vaginal treatments acting to correct vaginal mucous membrane laxity, due to a delivery or simply to natural aging, trying to re-establish its original calibre. The RF stimulation on collagen, increasing its turgidity, causes a proper hematic supply and a higher vaginal hydration and exudation, reduces aging symptoms and vaginal dryness, allowing a real functional restoration.

The result is a more toned, elastic, lubricated and normal sized vagina.

Thermal Therapy *Physio Vag* has two different handpieces, working in monopolar and bipolar mode, for internal and external treatments.
The mode is selectable directly on the touchscreen.
Each handpiece can work at 4 different frequencies, allowing to vary the action depth depending on the treatment to perform.

Furthermore, the temperature reached during the treatment is constantly and continuosly under control through heat sensors, placed inside each handpiece.
The value is visualized on the screen of the device, which, thanks to a warning alarm, stops working in case of overheating.

APPLICATIONS

- Vaginal tightening
- Labia remodelling
- Vaginal dryness
- Orgasmic dysfunction
- Mild urinary incontinence
- Vaginal prolapse
